"To create a positive impact through technology while following sustainable practices."

Technology Office Recruitment Team

February 4, 2026

LOGITECH
EPFL INNOVATION PARK
LAUSANNE, SWITZERLAND

Application for Sr. AI/ML Engineer, Video Position

Dear Hiring Manager,

Why Logitech's Technology Office

I am excited to apply for the Sr. AI/ML Engineer, Video position at Logitech's Technology Office. Having completed my Master's in Computational Science & Engineering at EPFL, the opportunity to return to the EPFL Innovation Park environment and contribute to breakthrough innovations in Video AI strongly resonates with me. The Technology Office's mission to bring state-of-the-art capabilities to Logitech's R&D aligns perfectly with my research background and passion for translating cutting-edge AI research into impactful solutions.

What particularly excites me is the emphasis on exploration and collaboration with academic partners—an environment where my PhD research experience and scientific mindset can thrive while tackling real-world engineering challenges.

My Computer Vision & VLM Expertise

My recent postdoctoral work at Idiap Research Institute focused on benchmarking state-of-the-art Vision-Language Models (Gemma3, Qwen2.5-VL, InternVL3) for explainable face recognition. This work involved:

- Designing evaluation methodologies for multimodal AI systems combining vision and language
- Training and scaling large models on institutional HPC infrastructure using Slurm clusters with distributed GPU computing
- Implementing efficient inference pipelines with vLLM and modern MLOps practices

Throughout my PhD (2021-2025), I developed deep expertise in computer vision through work on face morphing attacks, deepfakes, and biometric systems. I designed and implemented neural network architectures including CNNs for detection tasks and GANs for synthetic data generation, publishing six peer-reviewed papers in international conferences (IJCB, ICASSP, BIOSIG).

Technical Skills & Research Background

I bring hands-on experience across the full ML lifecycle that aligns with your requirements:

- Deep Learning Frameworks:** Advanced PyTorch proficiency, TensorFlow experience, modern stack (Huggingface Transformers, vLLM)
- Neural Network Architectures:** CNNs, GANs, Transformers, Vision-Language Models
- HPC & Large-Scale Training:** Extensive experience with institutional HPC clusters (Slurm), distributed GPU computing, scaling models efficiently
- Data Engineering:** Created synthetic face dataset using GANs, coordinated forensic data collection platform, implemented augmentation pipelines

- **Scientific Research:** Six peer-reviewed publications, supervised four master's students, taught annual ML course
- **Cross-functional Collaboration:** Coordinated multi-stakeholder projects, presented to diverse audiences from technical researchers to investors (won first place at startup hackathon)

My prior internship at Logitech (2019) on audio ML gave me initial exposure to applying research to product contexts and on-device deployment.

Addressing the Embedded Systems Gap

I want to be transparent: while I have extensive experience training and scaling large models on HPC infrastructure, my experience with embedded optimization (quantization, pruning, porting to ARM/edge devices) is limited. However, I am genuinely eager to develop this skillset.

I believe my strong foundation provides a solid basis for learning edge deployment:

- My HPC optimization experience (efficient GPU utilization, distributed training, inference optimization with vLLM) demonstrates an optimization mindset transferable to resource-constrained contexts
- My research background equips me to rapidly dive into new technical areas and apply state-of-the-art techniques
- My prior Logitech internship included deploying a demo on embedded microcontroller, showing early exposure to on-device constraints

The Technology Office's exploration-focused mission makes this an ideal environment to expand my skills from cloud/HPC to edge deployment while contributing my existing computer vision and VLM expertise.

Practical Details & Looking Forward

I am Swiss, available to start in mid-May 2026, and excited about the Lausanne location. My salary expectation is in the range of 115-130K CHF, though I am open to discussion based on the role scope and learning opportunities.

I would be thrilled to contribute to Logitech's Video AI innovations by bringing my computer vision research expertise, VLM experience, and collaborative mindset to the Technology Office team. The combination of breakthrough research, practical engineering constraints, and multidisciplinary collaboration is exactly the kind of challenge I seek.

Thank you for considering my application. I look forward to discussing how my research background and technical skills can contribute to defining the future of human-machine interaction through Video AI at Logitech.

Sincerely,

Laurent Colbois
