Application for JOB TITLE

Dear HIRING MANAGER NAME,

I am writing to apply for the JOB TITLE position at COMPANY NAME. Having recently completed a postdoctoral position at Idiap Research Institute where I focused on Vision-Language Models and reproducible ML workflows, I am now transitioning from academic research to industry. I am particularly drawn to this opportunity because SPECIFIC REASON (1-2 sentences about company mission, technology, or role).

My key differentiator is a strong focus on reproducible workflows and MLOps practices—skills I developed through necessity in research but which are highly valuable in industry. I have extensive hands-on experience with the modern ML engineering stack: experiment tracking (Weights & Biases, MLFlow), workflow orchestration (Snakemake, Prefect), containerization (Docker, Apptainer), and configuration management (Hydra). I approach ML projects with an engineering mindset, prioritizing code quality, reproducibility, and maintainability. While these practices were often undervalued in academia, I pursued them because I believe they are essential for building reliable, scalable systems.

I am excited about the possibility of contributing to COMPANY NAME's mission and would welcome the opportunity to discuss how my background in computer vision, MLOps practices, and cross-domain communication can add value to your team. Thank you for considering my application. I look forward to hearing from you.

Sincerely,

Laurent Colbois
